

Value Added Services

The following sub-sections contain information on the Value Added Service (VAS) options covered by this release of the OpenID Connect Provider from BankID. See the [Compatibility Matrix](#) for the relation between these VAS options and [Identity Providers \(IDP\)](#). See general information on [user experience](#) that applies for any VAS.

The OIDC Provider supports VAS-specific scopes and claims along with corresponding access tokens, either based on the default [access token format](#) or using a custom format tailored for each VAS-option. The OIDC Provider also offers [consent handling](#) for services that require consent from the end user.
