

OpenID Connect Provider from BankID

The **OpenID Connect Provider from BankID** is a **multi-Identity Provider (IDP)** platform returning standardized **ID Tokens** for authenticated end-users. The platform also provides **Access Tokens** to authorize subsequent access to **Value-Added Services (VAS)** on behalf of the end-user. Each value-added service is implemented in terms of a **Resource Server** and comes with its own set of **Scopes** and **Claims** that reflects various resources owned by the end-user. The end-user's **Consented Access** to resources is a key feature of the platform.

See the [Release Notes](#) for specific information on this particular release of the OpenID Connect Provider from BankID.
