

TINFO

Value-Added Service Name	Resource Server Endpoint
TINFO	Userinfo (TINFO)

The TINFO-service ("Tilleggsinfo") implements [Userinfo \(TINFO\)](#), i.e. a Protected Resource endpoint according to the [OIDC standards](#). Userinfo supports claims about the authenticated user beyond what is contained directly in the [ID Token](#). See separate pages for further details on the following:

- Supported [Scopes and claims](#) for the TINFO-service
- Type of [Access Token](#) used by TINFO-service
- [Consent handling](#) for supported TINFO-scopes

The TINFO-service does in addition support the following features in conjunction with consent handling:

- Request acceptance from the end-user of a license agreement (EULA) at first-time use of the service
- Request the end-user to update his data at first-time use and thereafter at regular intervals

Whenever the user is requested to update his data he may choose to retrieve data from an external source. The following table shows currently supported sources. More external data sources may be added as future options. Note that a data source may not offer data for each of the relevant scopes. Note further that the end-user may need to authenticate himself according to the requirements for each particular source.

✔ = Supported, ✖ = Not supported

Data source	Scopes			End-user authentication	Comment
	Email	Phone	Address		
 Digitale Medier 1881	✖	✔	✔	No	1881.no may contain both business and private contact points for any user. Currently only private contact points are used.
